Sun, 09 Dec 2018 14:03:00 GMT modern power system analysis nagrath pdf - A transformer is a static electrical device that transfers electrical energy between two or more circuits.A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force (emf) or "voltage" across a second coil wound around the same core. Electric power can be transferred between the two coils, without a metallic ...
